Quasinilpotent equivalence and spectra of upper triangular operator matrices

Let \mathfrak{X} be a Banach space, $M = (A_{ij})_{1 \leq i, j \leq n}$ in $\mathcal{L}(\mathfrak{X}^n)$ be an upper triangular matrix and denote $M_0 = \text{diag}(A_{ii})_{1 \leq i \leq n}$. We use quasinilpotent equivalence modulo invertible operators to obtain spectral similarity between M and M_0 . (Joint work with E. H. Zerouali)
